

I. Summary of Activities This Week:

- Max and Solomon worked to get the two main attack scripts working
- Brock reviewed the decision part of the attack script to make sure they work with the recon script.
- Mitch further developed “fake” data to discover with our attacks in the virtual machine

II. Progress Made:

- Recon gui now includes options to select different attacks
- Decision engine can almost automatically decide what attack script to run
- Windows 11 vulnerable machine created and different policies have been implemented along with a linux vm to attack.

III. Challenges or Issues Encountered:

- Still a little difficult to work on the same code and commit it to the github in a timely manner but we have been good at taking turns.

IV. Plans for Next Week:

- Wrap up the two main attack scripts
- Ensure the decision engine can choose the right attack scripts based on recon information
